

PRODUCT DATA SHEET

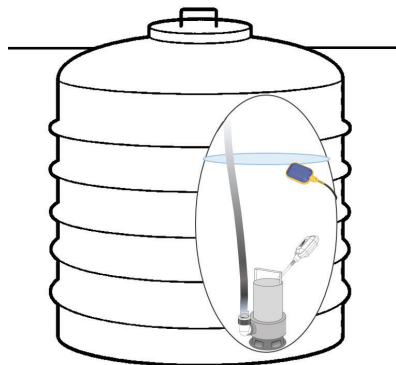

WHI PIGGYBACKFLOAT-V5 • 802669

BRAND

To prevent a pump from starting below a certain water level. This option is preferable to relying on in-built dry run protections

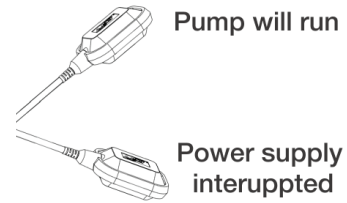

To delay the water level at which a submersible pump fitted with a float begins to operate.

PRODUCT DETAILS

A 'Piggyback' or 'Interrupter' type float can be fitted quickly, and without the need of an electrician, to provide additional control and protection for 230V single phase pump

The float controls the supply of voltage to the pump.

BENEFITS

- Improved pump control

FEATURES

- Fast, easy installation. No electrician required
- Pre-fitted counterweight
- 15m 'plug and play' water proof cable
- Certificate of Approval SAA 190723-EA
